

THE JOURNEY: Leaving the city    Boarding the Lantern Treehouse    Travelling through the trees    Above the canopy

## THE LANTERN TREEHOUSE CONCEPT

There are few sights more magical than paper lanterns illuminating a forest.

To recreate this magic, the Lantern Treehouse is threaded between trees, hung from independent supports to become part of the forest but not damage it. One Lantern Treehouse can become many, not only suspended among the trees but also moving through them, like gondolas: in the undergrowth, through the branches and above the canopy - an ever changing experience.

Like a veil, the delicate outer skin is a buffer to the weather as well as turning each Lantern Treehouse into an object of colour and elegance. Materials derived from trees - engineered timber, treated recycled paper, natural rubber and cork - are carefully crafted and stitched together with stainless steel and glass. The latticed paper envelope forms multiple triangular windows that can each be unfurled to reveal passing sights.

The Lantern Treehouse is layered to provide for all seasons and moods. Seating stairs wrap up between the paper skin and the protected circular core. The cocoon-like inner spaces are for sleeping and washing, the reading area offers protected light and views, and the upper terrace completely immerses the travellers in nature.

### LAYERS

- ..... Treated recycled paper in engineered timber lattice
- ..... Engineered timber cassette system with concealed services and coloured LED lighting
- ..... Recycled natural cork origins: Quercus suber
- ..... Timber reading bench
- ..... Timber seating stairs
- ..... Recycled natural rubber origins: Hevea brasiliensis
